JOBBER OF

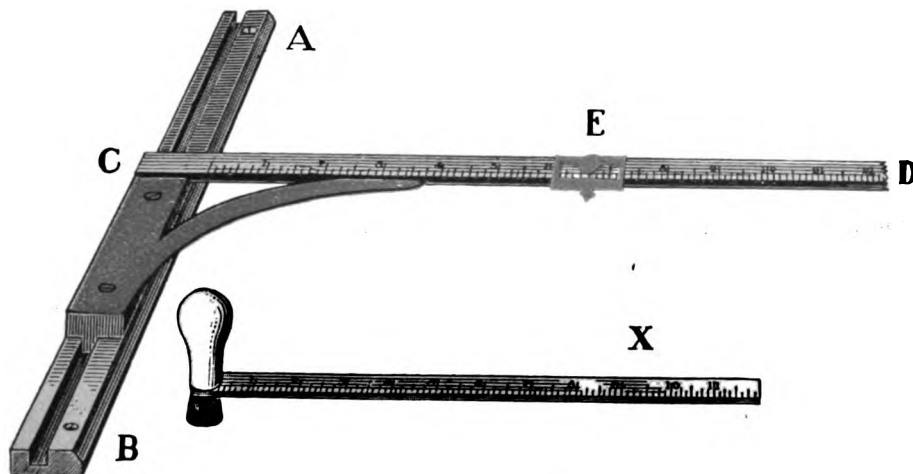

HORSE CLOTHING

AND

HARNESS

Most Complete and Largest Stock of Disston's Saws in New England.

## "THE ACCURATE" WINDOW-GLASS CUTTER

PATENTED FEB. 9, 1898.

This device is the first improvement ever placed within the reach of ordinary glaziers and others who make use of window glass. It is

**FIRST.**—More accurate than cutting with hand cutter and straight edge, as it insures an absolute rectangular cut.

**SECOND.**—It dispenses with the measurements on each end of your light, as you set your cutter right on the measurement you want.

**THIRD.**—Diminishes the risk of breaking, as you do not have to press a straight edge down hard on your glass to keep it from slipping.

**FOURTH.**—You don't have to wait for the only man in the shop who can cut glass. Anybody can use this tool without previous practice.

**FIFTH.**—It is a time-saver. If you have many lights of the same size to cut, you have to set it on the mark but once.

**SIXTH.**—It is portable. It can be carried to a job and set up very readily, as all that is necessary to set it up is a level place and three small screws.

**SEVENTH.**—In connection with the straight cut is an attachment using the same cutter whereby CIRCULAR CUTS OF ANY DIAMETER MAY BE MADE. This is absolutely the only successful mechanical appliance on the market for such a purpose.

**EIGHTH.**—Simplicity. Nothing to get out of order. This Cutter, including circular attachment, retails at \$3.00, with a liberal discount to the trade.
